

1 ABSTRACT OF THE DISCLOSURE

2 A system and method for establishing communication with any
3 one of a variety of different wireless communication devices
4 including through the provision of a short range transceiver
5 assembly so as to provide data communication from a sender to
6 the wireless communication device either over the Internet,
7 utilizing an Internet access facility, such as a computer, or
8 alternatively using an over-the-air network, compatible with the
9 communication device. The wireless communication device is
10 structured to operate on either of at least two independent
11 frequencies for communication with the computer or with the
12 over-the-air network, dependent on predetermined parameters
13 including the acceptance of a unique identifier or code and/or
14 the positioning of the wireless communication device, within a
15 predetermined vicinity range relative to the computer. An auto-
16 switching capability establishes data communication with the
17 computer or with the over-the-air network, dependent on whether
18 the identification and vicinity parameters have been met.
